## Solve each problem.

1) Two contractors are bidding on building a house. Contractor A's price is represented in the table below. Contractor B's price is represented by an equation, with y representing the total price and x representing the square feet of the house.

| Contractor A |  |
| :---: | :---: |
| Square <br> Feet | Total Price <br> (\$) |
| 1978 | 225,492 |
| 1926 | 219,564 |

Contractor B
$y=115 x$

Find the total price you'd get from building a $1,488 \mathrm{sq} / \mathrm{ft}$ house from the cheapest contractor.
2) Two companies are selling electricity by Kilo-watt hour. The cost of electricity for Company A is represented in the table below, while the cost for Company B is represented by an equation, with $y$ representing the total cost in dollars for $x$ kilowatt hours.

| Company A |  |
| :---: | :---: |
| Total Kilowatt- <br> Hours | Total <br> Cost <br> $(\$)$ |
| 1264 | 126.40 |
| 1417 | 141.70 |

## Company B

$y=0.14 x$

Find the total cost in dollars of buying 1,248 kilowatt hours of electricity from the more expensive company.
3) Two junk yards offered money for scrap metal. Junk Yard A's price is represented in the table below. Junk Yard B's price is represented by an equation, with y representing the total price and $x$ representing the pounds of metal recycled.

| Junk Yard A |  |
| :---: | :---: |
| Pounds | Total Price <br> (\$) |
| 1406 | $2,713.58$ |
| 1462 | $2,821.66$ |

## Junk Yard B

$\mathrm{y}=1.90 \mathrm{x}$

What is the difference in the price per pound between junk yard A and junk yard B?

## Solve each problem.

1) Two contractors are bidding on building a house. Contractor A's price is represented in the table below. Contractor B's price is represented by an equation, with y representing the total price and x representing the square feet of the house.

| Square <br> Feet | Total Price <br> $\mathbf{( \$ )}$ |
| :---: | :---: |
| 1978 | 225,492 |
| 1926 | 219,564 |
| $\mathrm{y}=114 \mathrm{x}$ |  |

Contractor B
$y=115 x$

Find the total price you'd get from building a $1,488 \mathrm{sq} / \mathrm{ft}$ house from the cheapest contractor.
2) Two companies are selling electricity by Kilo-watt hour. The cost of electricity for Company A is represented in the table below, while the cost for Company B is represented by an equation, with $y$ representing the total cost in dollars for $x$ kilowatt hours.

| Total Kilowatt- <br> Hours | Total <br> Cost <br> $\mathbf{( \$ )}$ |
| :---: | :---: |
| 1264 | 126.40 |
| 1417 | 141.70 |
| $\mathrm{y}=0.10 \mathrm{x}$ |  |

## Company B

$y=0.14 x$

$$
y=0.10 x
$$

Find the total cost in dollars of buying 1,248 kilowatt hours of electricity from the more expensive company.
3) Two junk yards offered money for scrap metal. Junk Yard A's price is represented in the table below. Junk Yard B's price is represented by an equation, with y representing the total price and $x$ representing the pounds of metal recycled.

| Junk Yard A |  | $\begin{gathered} \text { Junk Yard B } \\ \mathrm{y}=1.90 \mathrm{x} \end{gathered}$ |
| :---: | :---: | :---: |
| Pounds | Total Price (\$) |  |
| 1406 | 2,713.58 |  |
| 1462 | 2,821.66 |  |
| $\mathrm{y}=1.93 \mathrm{x}$ |  |  |

What is the difference in the price per pound between junk yard A and junk yard B?
