

Determine the number that will correctly balance each equation.

Answers

1) $42 + 25 = \underline{\hspace{2cm}} + 33$

2) $69 - 28 = 48 - \underline{\hspace{2cm}}$

1. _____

3) $12 - 10 = 17 - \underline{\hspace{2cm}}$

4) $26 + \underline{\hspace{2cm}} = 5 + 24$

2. _____

3. _____

5) $68 + 1 = 40 + 16 + \underline{\hspace{2cm}}$

6) $38 + 49 + 33 = 63 + \underline{\hspace{2cm}}$

4. _____

5. _____

6. _____

7) $49 + \underline{\hspace{2cm}} = 37 + 45 + 19$

8) $37 - \underline{\hspace{2cm}} = 61 - 41$

7. _____

8. _____

9. _____

10. _____

9) $8 + \underline{\hspace{2cm}} + 33 = 89 - 25$

10) $2 + 11 = \underline{\hspace{2cm}} + 9$

11. _____

12. _____

13. _____

14. _____

11) $37 + 20 = \underline{\hspace{2cm}} - 3$

12) $96 - \underline{\hspace{2cm}} = 36 + 43$

13) $140 - \underline{\hspace{2cm}} = 44 + 5 + 42$

14) $96 - 32 = 19 + \underline{\hspace{2cm}}$

Determine the number that will correctly balance each equation.

1) $42 + 25 = \underline{34} + 33$

2) $69 - 28 = 48 - \underline{7}$

3) $12 - 10 = 17 - \underline{15}$

4) $26 + \underline{3} = 5 + 24$

5) $68 + 1 = 40 + 16 + \underline{13}$

6) $38 + 49 + 33 = 63 + \underline{57}$

7) $49 + \underline{52} = 37 + 45 + 19$

8) $37 - \underline{17} = 61 - 41$

9) $8 + \underline{23} + 33 = 89 - 25$

10) $2 + 11 = \underline{4} + 9$

11) $37 + 20 = \underline{60} - 3$

12) $96 - \underline{17} = 36 + 43$

13) $140 - \underline{49} = 44 + 5 + 42$

14) $96 - 32 = 19 + \underline{45}$
