

Solve each problem.

1)  $\frac{6}{10} - \frac{2}{5} =$

2)  $\frac{4}{7} + \frac{3}{10} =$

3)  $\frac{2}{6} - \frac{1}{9} =$

4)  $\frac{4}{7} + \frac{4}{10} =$

5)  $\frac{7}{10} - \frac{1}{2} =$

6)  $\frac{5}{6} + \frac{3}{9} =$

7)  $\frac{4}{9} - \frac{3}{7} =$

8)  $\frac{3}{5} + \frac{1}{9} =$

9)  $\frac{3}{4} - \frac{7}{10} =$

10)  $\frac{8}{9} + \frac{5}{7} =$

Solve each problem.

1)  $\frac{6}{10} - \frac{2}{5} = \frac{6}{10} - \frac{4}{10} = \frac{2}{10}$

2)  $\frac{4}{7} + \frac{3}{10} = \frac{40}{70} + \frac{21}{70} = \frac{61}{70}$

3)  $\frac{2}{6} - \frac{1}{9} = \frac{6}{18} - \frac{2}{18} = \frac{4}{18}$

4)  $\frac{4}{7} + \frac{4}{10} = \frac{40}{70} + \frac{28}{70} = \frac{68}{70}$

5)  $\frac{7}{10} - \frac{1}{2} = \frac{7}{10} - \frac{5}{10} = \frac{2}{10}$

6)  $\frac{5}{6} + \frac{3}{9} = \frac{15}{18} + \frac{6}{18} = 1\frac{3}{18}$

7)  $\frac{4}{9} - \frac{3}{7} = \frac{28}{63} - \frac{27}{63} = \frac{1}{63}$

8)  $\frac{3}{5} + \frac{1}{9} = \frac{27}{45} + \frac{5}{45} = \frac{32}{45}$

9)  $\frac{3}{4} - \frac{7}{10} = \frac{15}{20} - \frac{14}{20} = \frac{1}{20}$

10)  $\frac{8}{9} + \frac{5}{7} = \frac{56}{63} + \frac{45}{63} = 1\frac{38}{63}$

Answers

1.  $\frac{2}{10}$

2.  $\frac{61}{70}$

3.  $\frac{4}{18}$

4.  $\frac{68}{70}$

5.  $\frac{2}{10}$

6.  $1\frac{3}{18}$

7.  $\frac{1}{63}$

8.  $\frac{32}{45}$

9.  $\frac{1}{20}$

10.  $1\frac{38}{63}$
