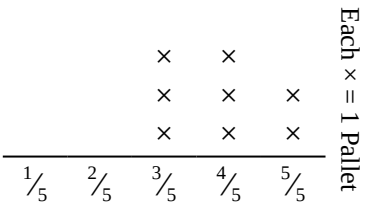
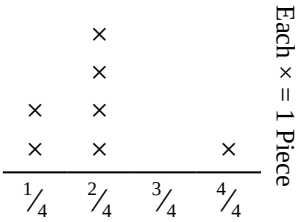
Solve each problem.

1) The line plot below shows the weight (in tons) of boxes on pallets.



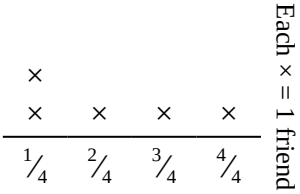
If the weight were redistributed evenly, how much weight would be on each pallet?

2) Oliver cut a rope into different lengths. The line plot below shows the length (in feet) of the cut pieces.



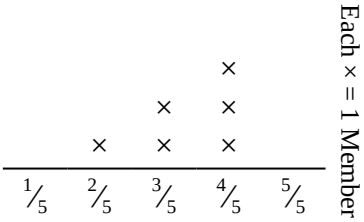
If he had cut the rope so each piece was the same length, how long would each piece be?

3) The line plot below shows the pounds of candy a group of friends received.



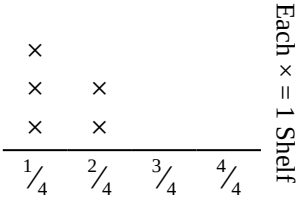
If they split the total amount of candy evenly, how much would each friend get?

4) The line plot below shows the distance (in miles) that each member of a relay race travelled.



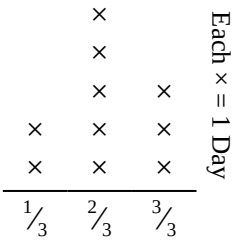
How far would each person have run if the distances were distributed evenly?

5) The line plot below shows the weight (in kilograms) that each cabinet shelf is holding.



Find the amount of weight each shelf would have if the weight were redistributed equally.

6) The line plot below shows the amount of water a plant received (in cups) over the course of {10} days.



Find how many cups of water the plant would have received if it got the same amount each day.
