$2 / 4 \times 3=$
To solve multiplication problems with fractions one strategy is to think of them as addition problems.
For example the problem above is the same as:

$$
2 / 4+2 / 4+2 / 4
$$

$$
\frac{2}{4} \times 3=
$$

If we shade in $2 / 4$ on the fractions below 3 times we can see a visual representation of the problem.

$$
2 / 4 \times 3=12 / 4
$$

After shading it in we can see why $2 / 4$ three times is equal to 1 whole and $2 / 4$.
