Solve each problem.

1) A bakery used one-fifth of a bag of chocolate chips to make 3 batches of cookies. How much of the bag did they use for each batch?
2) A car wash had to make their soap last 3 days. If they only have one-sixth of a gallon of soap, how much should they use each day so it lasts 3 days?
3) A chef used one-half of a bag of potatoes for a meal. If the potatoes fed 2 people, what fraction of the bag did each person get?
4) A glass of water was one-ninth of a liter. How many glasses would it take to fill up a 4 liter jug?
5) A container of 7 metal beams weighed one-half of a ton. If every beam weighed the same amount, how heavy was each?
6) Nancy was trying to collect 8 pounds of cans to recycle. If she collects one-third of a pound each day, how many days will it take to collect 8 pounds?
7) Robin had picked 8 bags of oranges. How many glasses of orange juice could she make if each glass took one-ninth of a bag?
8) A toy plush weighed one-ninth of a pound. A flimsy box can hold 8 pounds. How many toy plushes could the box hold?
9) A bag of walnuts was 5 pounds. How many one-eighth of a pound servings are there in a bag?
10) An artist was able to draw one-eighth of a picture every hour. If he needed to paint 9 pictures for an art show, how many hours would it take him?
11) An aquarium had 9 tons of fish food. How many months would it take them to use it all if they used one-half of a ton each month?
12) At a restaurant 3 people were at a table when the waiter brought out one-ninth of a bowl of cheese dip. If they split the bowl evenly, how much would each person get?
13) A farmer was dividing up his one-half of an acre of land between his 6 children. Since each child got the same amount of land, what fraction of the acre did each get?
