## Solve each problem.

Answers

1) A lawn mowing company had to mow one-third of a mile of grass. To make it quicker, they split the amount evenly between 4 workers. What fraction of the mile did each person mow?
2) At the end of the day a restaurant had one-sixth of a pound of leftover food. If 6 employees wanted to split it, how much would each employee get?
3) A moving company had one-eighth of a ton of weight to move across town. If they wanted to split it equally amongst 4 trips, how much weight would they have on each trip?
4) A chef had 4 potatoes. How many bowls of mashed potatoes could he make if each bowl used one-ninth of a potato?
5) A malt shop used one-third of a box of waffle cones every day they were open. How many days would 4 whole boxes last them?
6) A farmer was dividing up his one-ninth of an acre of land between his 7 children. Since each child got the same amount of land, what fraction of the acre did each get?
7) At a restaurant 4 people were at a table when the waiter brought out one-third of a bowl of cheese dip. If they split the bowl evenly, how much would each person get?
8) A small book took one-fifth of a ream of paper to make. How many books could be made with 8 whole reams of paper?
9) A store had 2 boxes of video games. How many days would it take to sell the games if each day they sold one-ninth of a box?
10) A chef used one-fifth of a bag of potatoes for a meal. If the potatoes fed 7 people, what fraction of the bag did each person get?
11) A glass of water was one-third of a liter. How many glasses would it take to fill up a 5 liter jug?
12) Ned had to write 3 pages for a book report. How many hours would it take him to write it if he wrote one-fifth of a page each hour?
13) A container of 9 metal beams weighed one-fifth of a ton. If every beam weighed the same amount, how heavy was each?
