

Solve each problem.

Answers

- 1) At lunch a waiter had nine customers and four of them didn't leave a tip. If he got \$2 each from the ones who did tip, how much money did he earn?
- 2) A worksheet had five problems on it. If a teacher had twelve worksheets to grade and had already graded four of them, how many more problems does she have to grade?
- 3) Billy invited seven friends to a birthday party, but four couldn't come. If he wanted to buy enough cupcakes so each person could have exactly six, how many should he buy?
- 4) Ned earned two dollars for each lawn he mowed. If he had seven lawns to mow, but forgot to mow four of them, how much money did he actually earn?
- 5) Katie baked four brownies, but needed eight total for her party. If she used nine spoonfuls of flour on each one, how much cups of flour does she still need?
- 6) George had three action figures, but needed nine total for a complete collection. If each one costs \$5, how much money would he need to finish his collection?
- 7) In a video game, each enemy defeated gives you six points. If a level has twelve enemies total and you destroy all but seven of them, how many points would you earn?
- 8) A new building needed nine windows. The builder had already installed five of them. If it takes five hours to install each window, how long will it take him to install the rest?
- 9) A chef needs eight potatoes for a meal. He has already cooked three. If each potato takes two minutes to cook, how long will it take him to cook the rest?
- 10) Maria earned nine points for each bag of cans she recycled. If she had five bags, but didn't recycle two of them, how many points would she have earned?
