

Solve each problem.

Answers

- 1) At a restaurant each adult meal costs \$5 and kids eat free. If a group of nine people came in and two were kids, how much would it cost for the group to eat?
- 2) There were thirteen friends playing a video game online when six players quit. If each player left had two lives, how many lives did they have total?
- 3) A new building needed seven windows. The builder had already installed three of them. If it takes nine hours to install each window, how long will it take him to install the rest?
- 4) In a video game, each enemy defeated gives you two points. If a level has sixteen enemies total and you destroy all but nine of them, how many points would you earn?
- 5) Each chocolate bar in a box cost \$8. If a box had eleven bars total and Janet sold all but five bars, how much money would she have made?
- 6) Oliver had three action figures, but needed seven total for a complete collection. If each one costs \$9, how much money would he need to finish his collection?
- 7) A painter needed to paint ten rooms in a building. Each room takes five hours to paint. If he already painted eight rooms, how much longer will he take to paint the rest?
- 8) At lunch a waiter had ten customers and six of them didn't leave a tip. If he got \$5 each from the ones who did tip, how much money did he earn?
- 9) Nancy earned three points for each bag of cans she recycled. If she had thirteen bags, but didn't recycle five of them, how many points would she have earned?
- 10) Bianca baked five brownies, but needed eleven total for her party. If she used five spoonfuls of flour on each one, how much cups of flour does she still need?
