Answers

- 1) Frank and Olivia were comparing their Halloween candy. Frank received 3 times as much candy as Olivia received. Frank then split his candy evenly into 5 piles to eat later. If Olivia received 40 ounces of candy, how many ounces of candy would be in each of Frank's piles?
- 2) At Carol's bakery over the course of a year she sold 36 birthday cakes for \$85 a cake. At the end of the year she determined that for each cake she sold she had spent $\frac{1}{3}$ of the sale price on ingredients. How much money did she spend on ingredients for cakes?
- 3) A king size candy bars costs \$1 with each candy bar having 1,140 calories. If you bought 3 candy bars and took 6 days eating them (eating the same amount each day) how many calories would you consume a day?
- 4) Tiffany was trying to save up \$385. At her job she made \$14 an hour and she worked 33 hours a week. After paying for her food and other expenditures she ended up only saving $\frac{1}{2}$ of her weeks earnings. How much money did she save up each week?
- 5) Sarah's mother had 12 small photo albums filled with 27 photos in each. In order to save some space she bought 9 larger albums with each album having 50 pages. If she wanted to put all her pictures into the large albums, with the same number of pictures in each, how many pictures should be in each album?
- 6) A developer was buying land. He bought 4 acres at \$1,099 per acre. He then split the land he purchased into 7 lots. How much should he sell each lot for just to break even?
- 7) Luke developed a game for phones that he sold for \$2. After the first week he discovered he had 1,870 downloads from girls and 4 times as many boys download the game. Of the boys who downloaded it he only had $\frac{1}{5}$ who bought the full game. How many boys bought the full game?
- 8) At a potato chip factory there were 90 machines working with each machine able to produce 88 chips a minute. If this is enough potato chips to fill 8 shipping boxes, how many chips are there per box?

- 1) Jerry developed a game for phones that he sold for \$2. After the first week he discovered he had 4,656 downloads from girls and 4 times as many boys download the game. Of the boys who downloaded it he only had $\frac{1}{8}$ who bought the full game. How many boys bought the full game?
- 2) Haley was trying to save up \$362. At her job she made \$10 an hour and she worked 28 hours a week. After paying for her food and other expenditures she ended up only saving $\frac{1}{2}$ of her weeks earnings. How much money did she save up each week?
- 3) Over the course of 13 weeks Maria collected 8 pounds of cans to recycle and Frank collected 3 times as much as Maria. Frank then put his collection into 8 bags to take to the recycling center. How many pounds of cans did Frank put into each bag?
- 4) At the flea market Will found 7 buckets of LEGOs with each bucket containing 9,448 LEGO pieces. If he wanted to split the LEGO pieces into 4 piles, how many pieces should he put into each pile?
- 5) A contractor bought 59 boxes of nails at a price of \$2 per box. Each box contained 18 nails. If he distributed the nails to the 6 houses he was building and made sure each house received the same number of nails, how many nails would each house get?
- 6) An industrial machine made 6,636 cans of diet sodas and 5 times as many regular sodas over the course of 57 minutes. The regular sodas were then placed into 6 shipping boxes with each shipping box containing the same number of sodas. How many regular sodas were in each shipping box.
- 7) A donation center had filled up 63 small bins with canned food with each bin containing 16 cans. They plan to send the cans out to 4 food banks but want to give each food bank the same number of cans. How many cans should they give to each food bank?
- 8) Luke and Sarah were comparing their Halloween candy. Luke received 2 times as much candy as Sarah received. Luke then split his candy evenly into 5 piles to eat later. If Sarah received 15 ounces of candy, how many ounces of candy would be in each of Luke's piles?
