## Solve each problem.

Ex) Every centimeter is 10 millimeters. This can be expressed using the equation y $\times 10=\mathrm{Z}$, where $y$ is equal to the number of centimeters and $Z$ is equal to the total number of millimeters. Using this equation find the total millimeters in 5 centimeters.

1) Every liter is 1,000 milliliters. This can be expressed using the equation $y \times 1,000=Z$, where y is equal to the number of liters and Z is equal to the total number of milliliters. Using this equation find the total milliliters in 5 liters.
2) Every dollar is 10 dimes. This can be expressed using the equation $\mathrm{y} \times 10=\mathrm{Z}$, where y is equal to the number of dollars and Z is equal to the total number of dimes. Using this equation find the total dimes in 5 dollars.
3) Every meter is 100 centimeters. This can be expressed using the equation $y \times 100=Z$, where y is equal to the number of meters and Z is equal to the total number of centimeters. Using this equation find the total centimeters in 8 meters.
4) Every quarter is 25 pennies. This can be expressed using the equation $y \times 25=Z$, where $y$ is equal to the number of quarters and Z is equal to the total number of pennies. Using this equation find the total pennies in 4 quarters.
5) For each kilogram there are 1,000 grams. This can be expressed using the equation $y \times$ $1,000=\mathrm{Z}$, where y is equal to the number of kilogram and Z is equal to the total number of grams. Using this equation find the total grams in 2 kilograms.
6) Every dollar is 4 quarters. This can be expressed using the equation $\mathrm{y} \times 4=\mathrm{Z}$, where y is equal to the number of dollars and Z is equal to the total number of quarters. Using this equation find the total quarters in 4 dollars.
7) Every gallon is 4 quarts. This can be expressed using the equation $y \times 4=Z$, where $y$ is equal to the number of gallons and Z is equal to the total number of quarts. Using this equation find the total quarts in 2 gallons.
8) Every cup is 8 ounces. This can be expressed using the equation $\mathrm{y} \times 8=\mathrm{Z}$, where y is equal to the number of cups and Z is equal to the total number of ounces. Using this equation find the total ounces in 2 cups.
9) Every quart is 2 pints. This can be expressed using the equation $y \times 2=Z$, where $y$ is equal to the number of quarts and Z is equal to the total number of pints. Using this equation find the total pints in 3 quarts.
10) Every kilometer is 1,000 meters. This can be expressed using the equation $y \times 1,000=Z$, where y is equal to the number of kilometers and Z is equal to the total number of meters. Using this equation find the total meters in 2 kilometers.
11) Every dollar is 100 pennies. This can be expressed using the equation $y \times 100=Z$, where y is equal to the number of dollars and Z is equal to the total number of pennies. Using this equation find the total pennies in 2 dollars.
12) For each pound there are 16 ounces. This can be expressed using the equation $y \times 16=Z$, where y is equal to the number of pounds and Z is equal to the total number of ounces. Using this equation find the total ounces in 7 pounds.
