

Use subtraction to solve each problem.

Answers

- 1) In one season a farmer picked 1,348 potatoes. If 439 of them were bad and he sold another 364 of them, how many did he have left?
- 2) Mike collected 3 rocks from his garden. All together they weighed 1,380 grams. If the first rock weighed 135 grams and the third rock was 546 grams, how much did the second rock weigh?
- 3) Edward's class was trying to collect 1,459 cans total. In the first month they collected 113 cans and in the next month they collected 785. How many more cans do they need to collect?
- 4) Over the summer Tom earned 1,715 dollars doing lawn care (mowing, weed eating and weed spraying). If he earned 453 dollars weed eating and 569 dollars mowing lawns, how much money did he earn with his weed spraying?
- 5) Maria had to hand out 1,894 flyers for her job. She handed out 816 in her first hour and 240 the second hour. How many flyers did she have to give away after the first two hours?
- 6) Henry's favorite book trilogy had 1,392 pages total. If the first book was 637 pages and the last book was 427 pages, how many pages was the second book?
- 7) Vanessa could send 910 text messages in a month. If she sent 118 messages the first week and 459 the second week, how many text messages can she still send?
- 8) To prepare for a marathon, Olivia decided to try and jog 1,708 meters in one day. If she jogged 388 meters in the morning and 803 in the afternoon, how many more meters does she need to jog?
- 9) A school ordered 1,377 packs of paper. If they used 374 packs the first semester and 224 the second semester, how many packs would they have left?
- 10) At the dog show there were 2,060 guests total. If there were 455 guests on Friday and another 844 on Sunday, how many people went to the dog show on the last day?
